OtterDesk

Hire private AI workers on your own computers

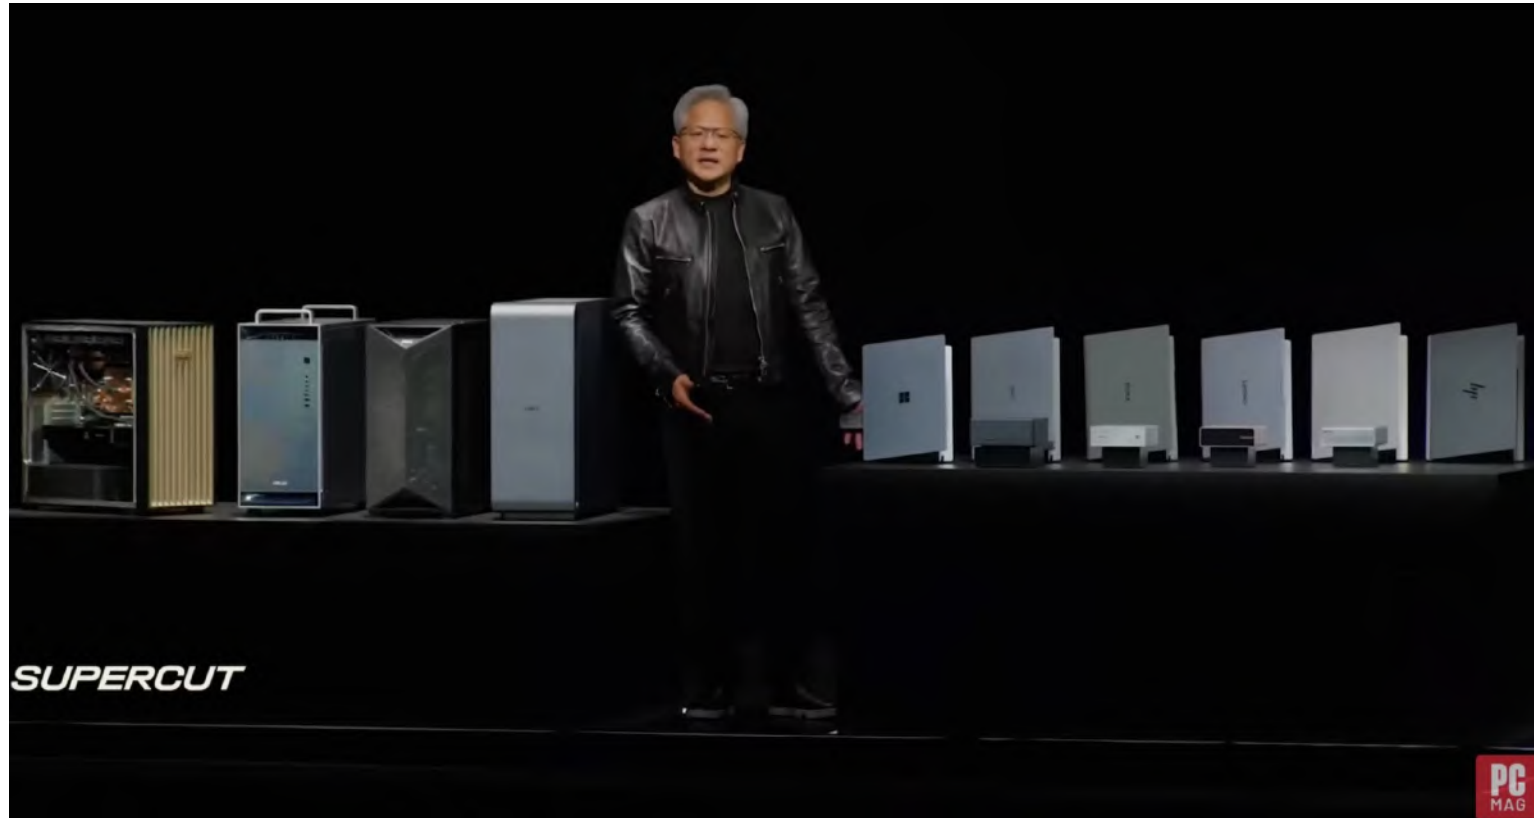

Homer Quan

homer@otterdesk.app

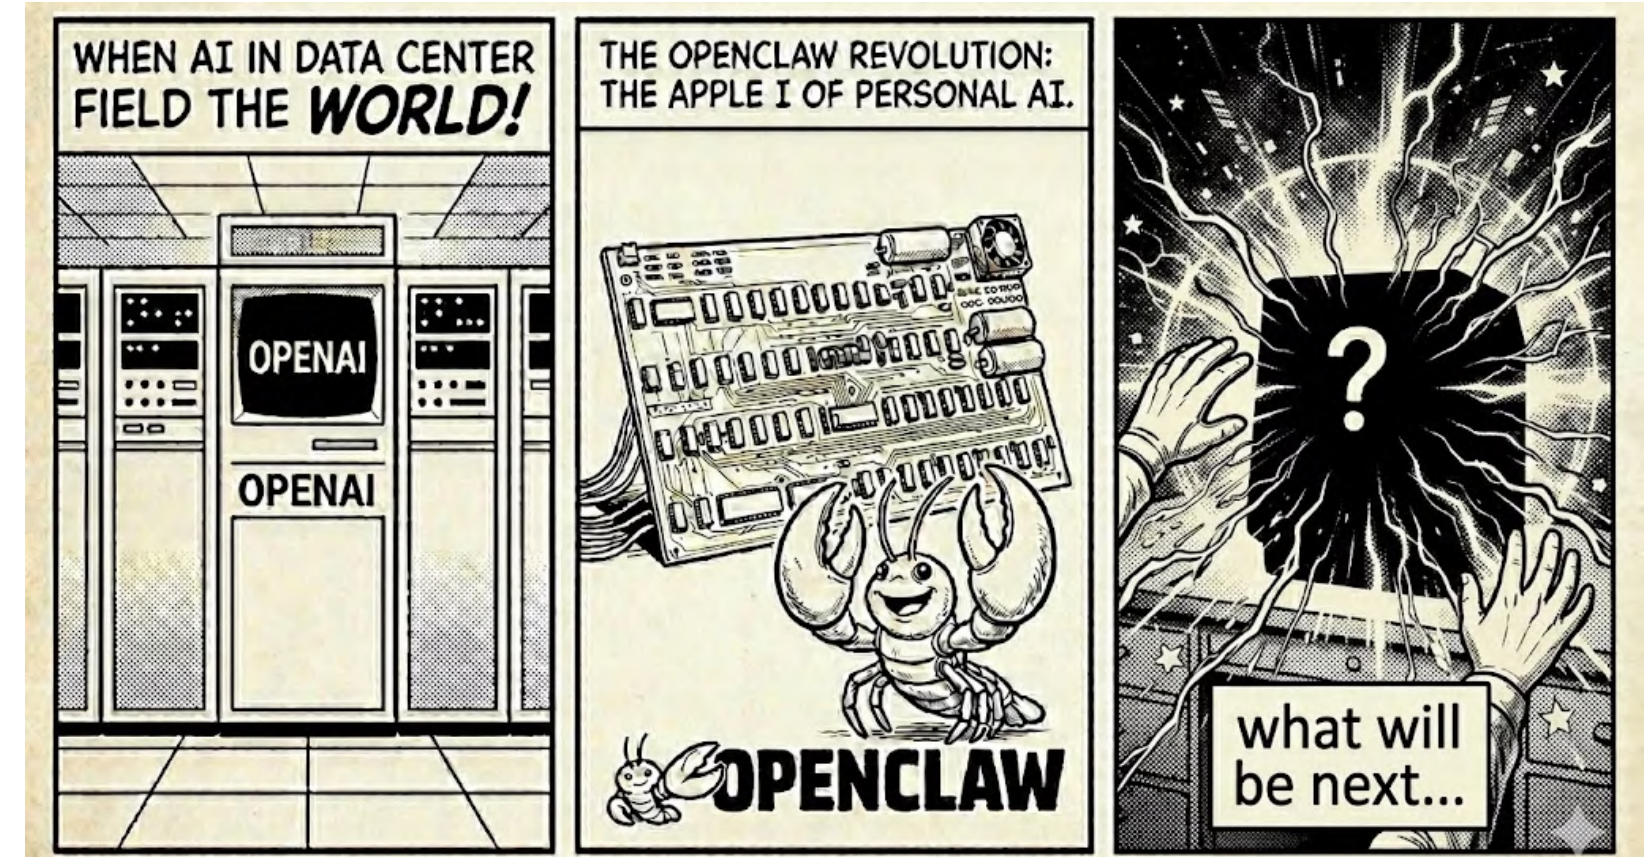

AI agents are still pre-PC

Powerful, centralized, useful, but not fully owned, not reliable

*Screenshot from NVIDIA GTC Taipei

'Tell me that's not R2D2. Tell me that's not robotics': Jensen Huang thinks the future of personal computing is letting AI agents run your PC

News By James Bentley published yesterday

"We're going to redefine how people think about computers."

Today, users must choose: convenience or control

Cloud AI workers are easy to use,
but **private work leaves your control.**
unpredictable result, unpredictable cost

Local AI workers (e.g., OpenClaw) are private,
powerful, and saving cost. But **too hard to run**

This tradeoff blocks adoption.

Trust – not technology – will determine AI success: report

Summarize

'Organizations that embed trust as a measurable leadership priority are better positioned to translate AI adoption into sustained productivity'

Jim Wilson

OtterDesk: Find and run private AI workers on their own computers with one click.

24/7 AI workers on your PCs, Private by default

Your own AI workers close to where your data lives.

Easy to use

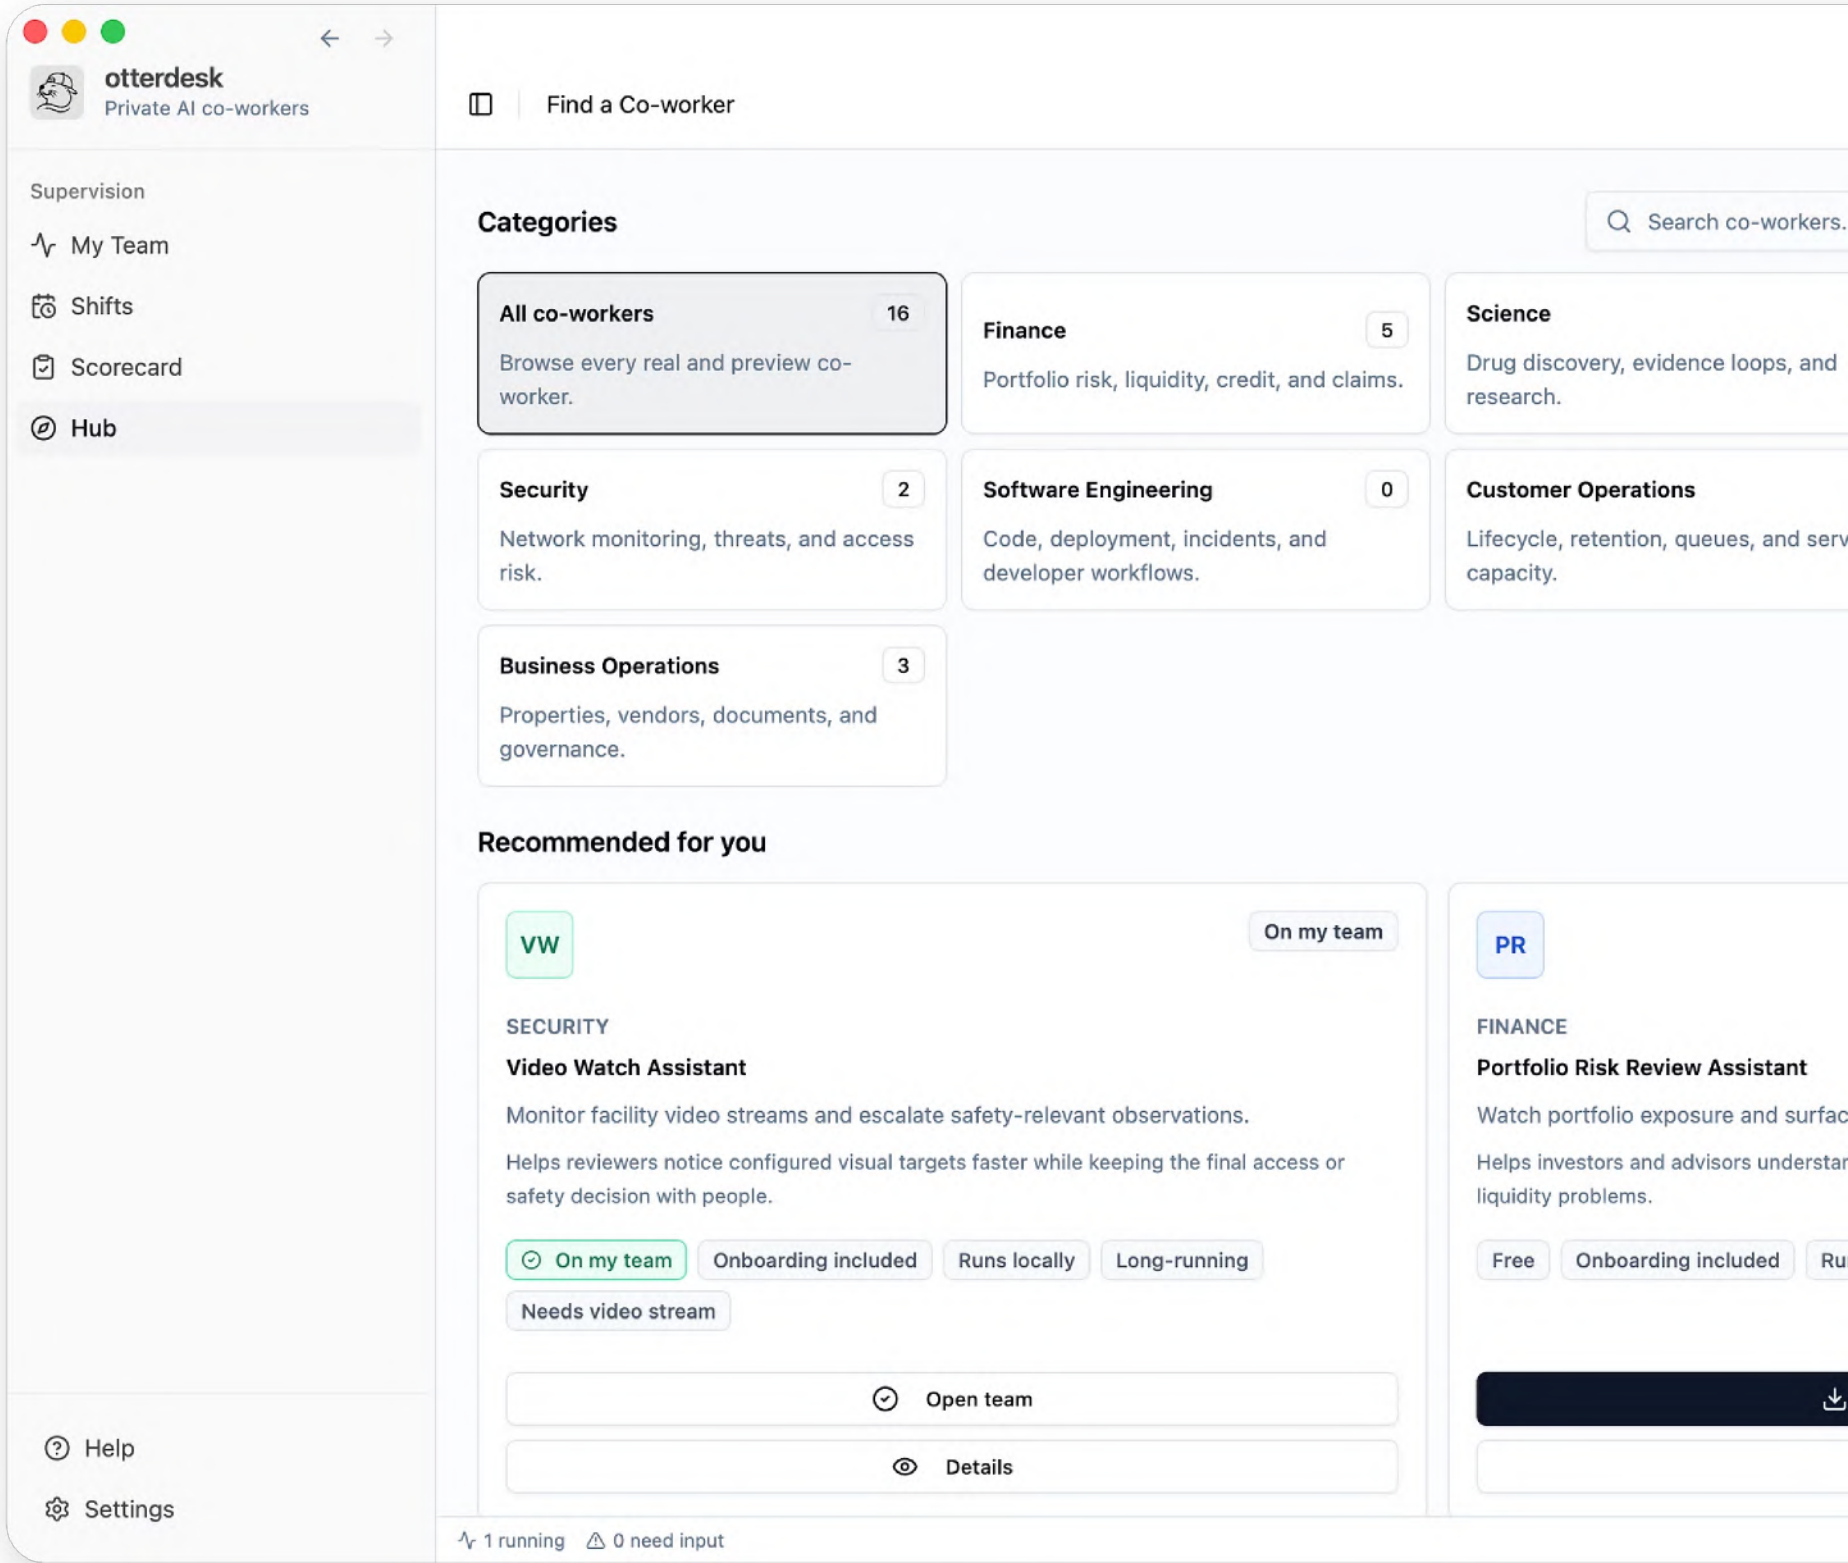

Start a co-worker in one click.

Visible and governed

Every action can be reviewed, approved, and audited.

Desktop AI runtime, just like Docker

Try Pitch

Example: Hiring a Private AI Finance Co-worker

Before OtterDesk

Option 1: Build your own private AI workflow

Choose models, tune for your hardware, install runtimes, connect private data, write workflow logic, test failures, observations ...

Result: private AI becomes an engineering project.

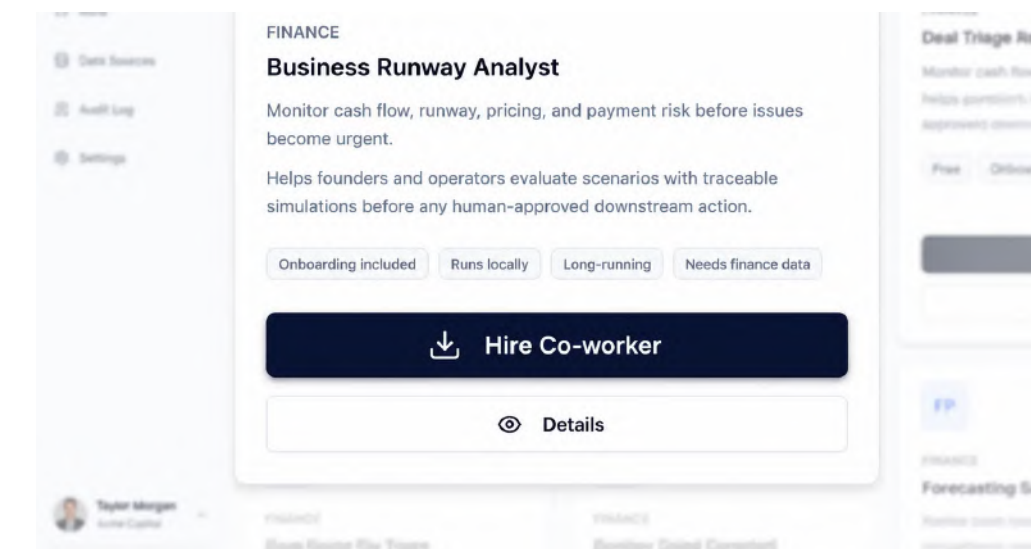

Option 2: Try OpenClaw-style local agents

Great for exploration and demos, but hard to trust for long-horizon business work. The agent may run, but still lacks:

Identity, Permissions, Audit trail, Monitoring Recovery

Result: powerful local AI, but not yet repeatable software.

After OtterDesk

Click a button and OtterDesk takes care of the runtime, coordination, permissions, and monitoring. Need more capacity? Just buy more PCs.

Result: private AI works like managed PC software with trust and ownership of data and knowledge

OtterDesk makes local AI workflow easy, repeatable, governed, and scalable as real AI co-workers.

Why OtterDesk is defensible

Full stack ownership

We control how AI workers start, monitor, coordinate, and scale.

Network effect

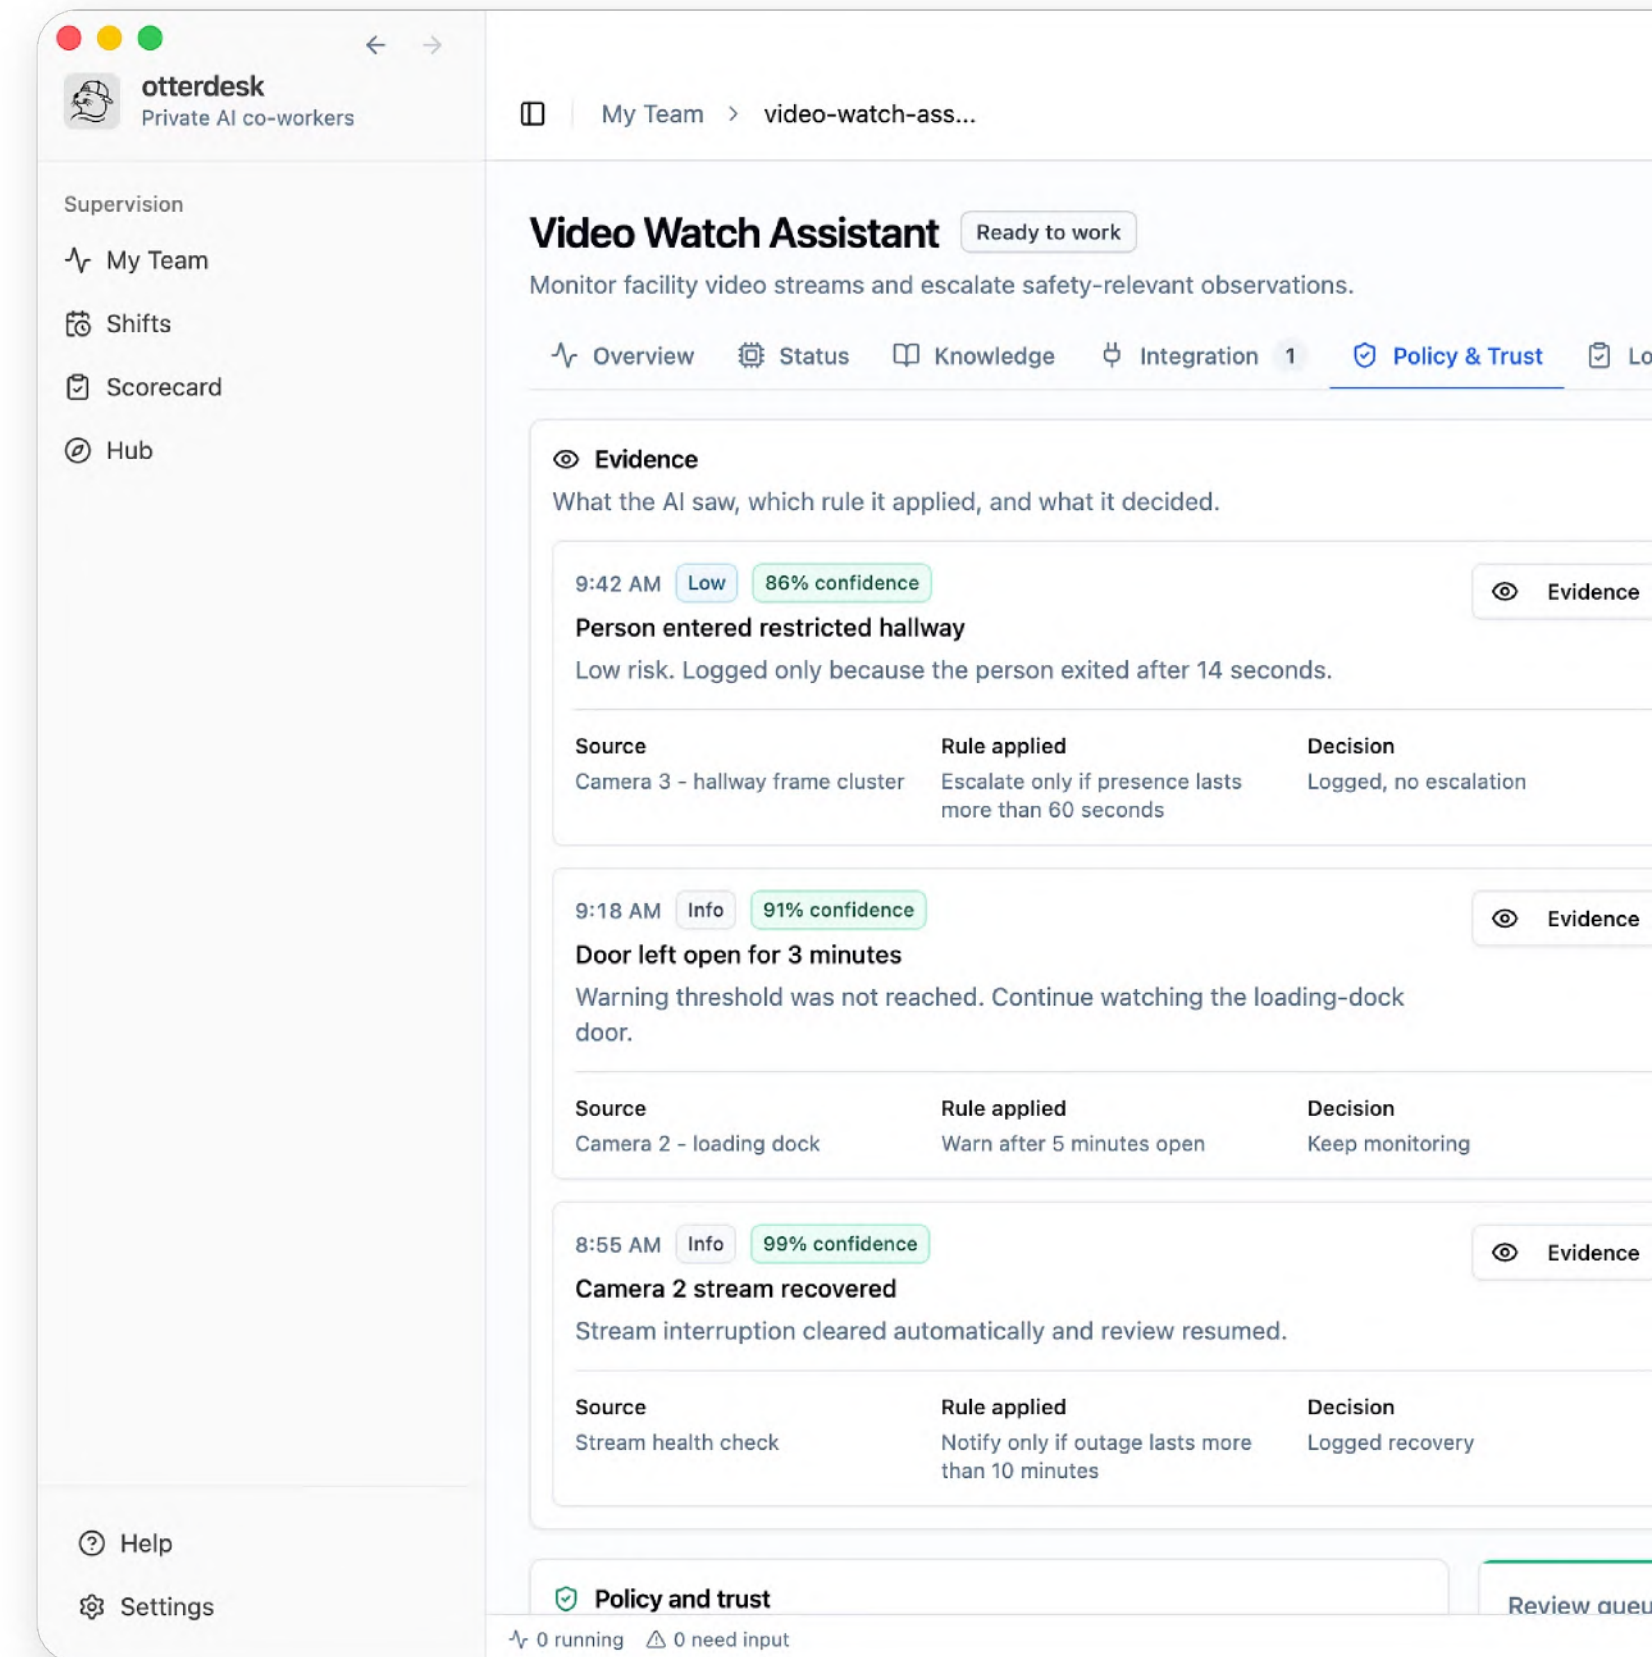

GPU and model providers need this distribution and runtime layer to drive adoption.

Private runtime standard

Control center for local tools, knowledges, policy, permissions, audit trails ...

We can be the desktop distribution and runtime layer of local AI agents, like docker.

Try Pitch

GTM: Product Driven

1. Start with local AI power users

Free install. Ready-to-hire AI co-worker blueprints

First AI co-worker in under one minute (one click).

2. Expand to privacy-sensitive professionals

Founders, finance, legal, security, research, and operators.

They need AI on private sensitive data and workflows.

3. Grow into enterprise and science research

Teams pay for trust, control, audit, and integrations.

Partners bring compute, models, data, and distribution.

- ✓ Personal finance analyst
- ✓ Local document automation
- ✓ Inbox / file organizer

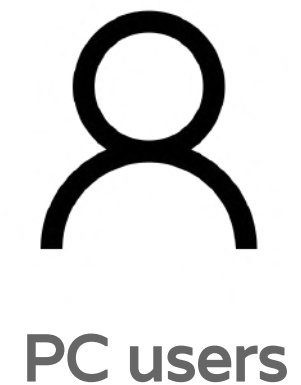

- ✓ Financial analysis + simulation
- ✓ Cybersecurity inspection
- ✓ Deep document analysis

- ✓ Scientific research assistant
- ✓ Drug discovery workflow
- ✓ Physical AI

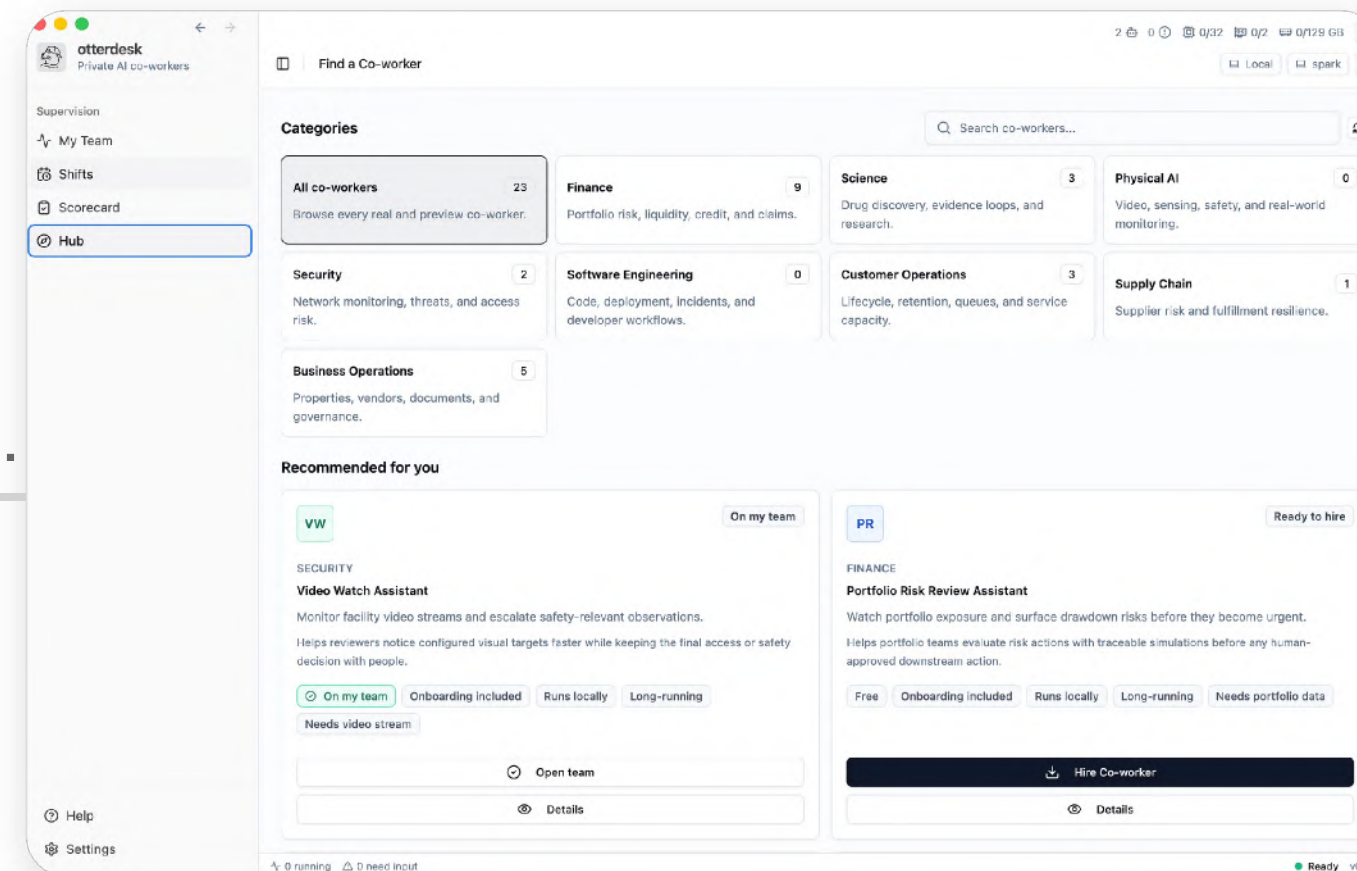

OtterDesk sells local solution of AI workflows, not only AI models

Business model

AI Workers

Free, \$5/hr, \$100/day...

Vertical models providers:
BIM, EDA, Health, Physical,
Life Science...

Datasource, API providers

Developers

Like an App Store, a **marketplace** for **pre-build but customizable** AI workers

We sell our own AI workers by usage (e.g., \$100/day).

For 3rd party, 15-30% sales commission, we provide B2B distribution, certificating and optimizing services.

Why now

AI is moving to long horizon works.

Hardware is moving to the edge.

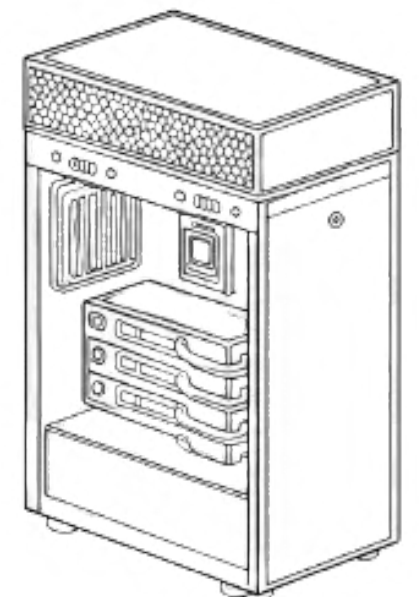

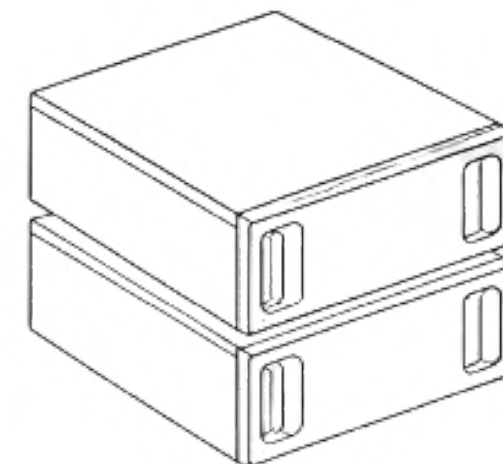

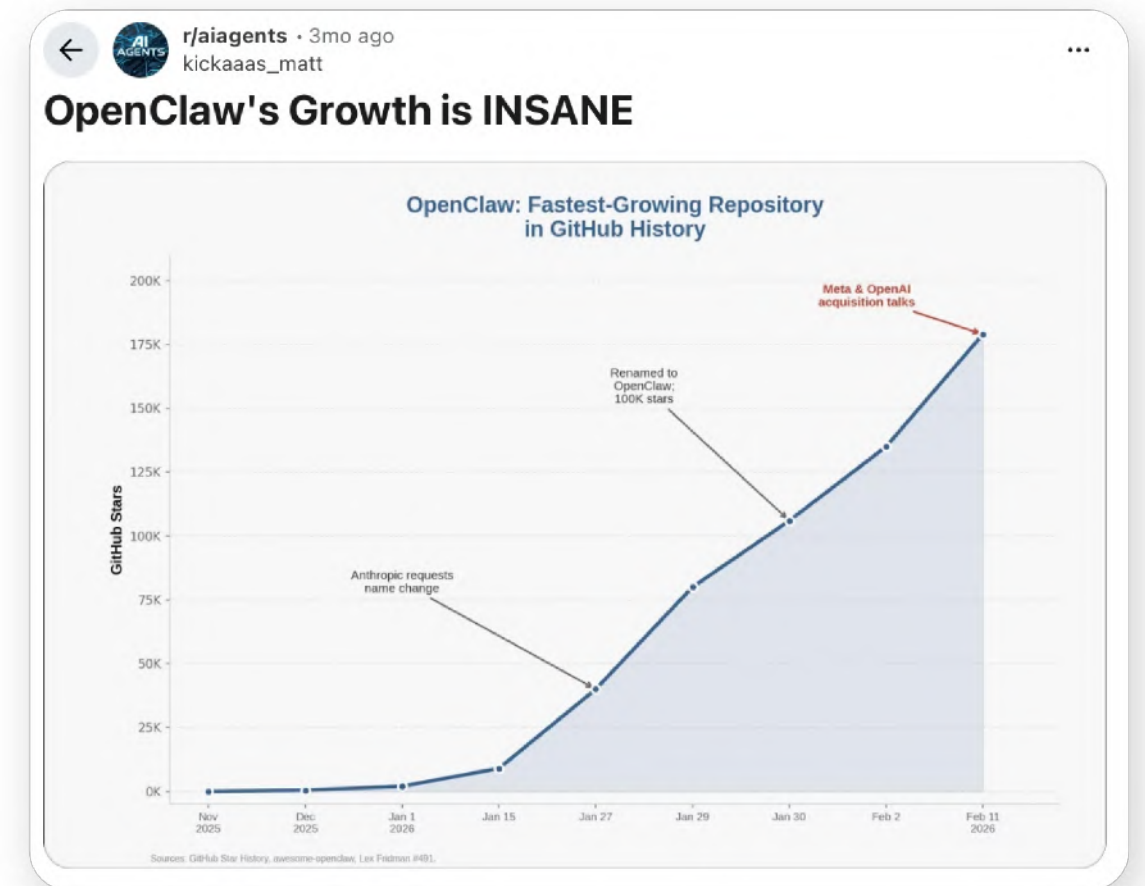

The model layer is being commoditized.

The orchestration layer is still open.

OpenClaw lacks the repeatable value and trust of traditional software.

OtterDesk is building the

default desktop runtime for private AI coworkers.

Why I am building this

Founder
HOMER QUAN

CTO at SP8CEAI: Satellites preparing in air-gapped data infra
Co-founder at Pajama Cats Media: AI-powered children books
Co-founder at Reflen: Human and AI learning from each other
Chief Architect at Wise Systems: Real-time logistic optimization

Raising \$1M pre-seed

YC post-money SAFE

\$12M valuation cap, no discount

This round gets us to:

Public beta · Legal · Partnership

I'd love your feedback

Demo upon request
